CASE NAME: .Online Food Ordering Website

EXPLANATION OF MY WEB PAGE

The above HTML code is used to create a simple Online Food Ordering Website named Foodie.

The website allows users to view food items, check prices, explore special offers, read customer reviews, and click Order Now buttons

Foodie – Online Food Ordering Website

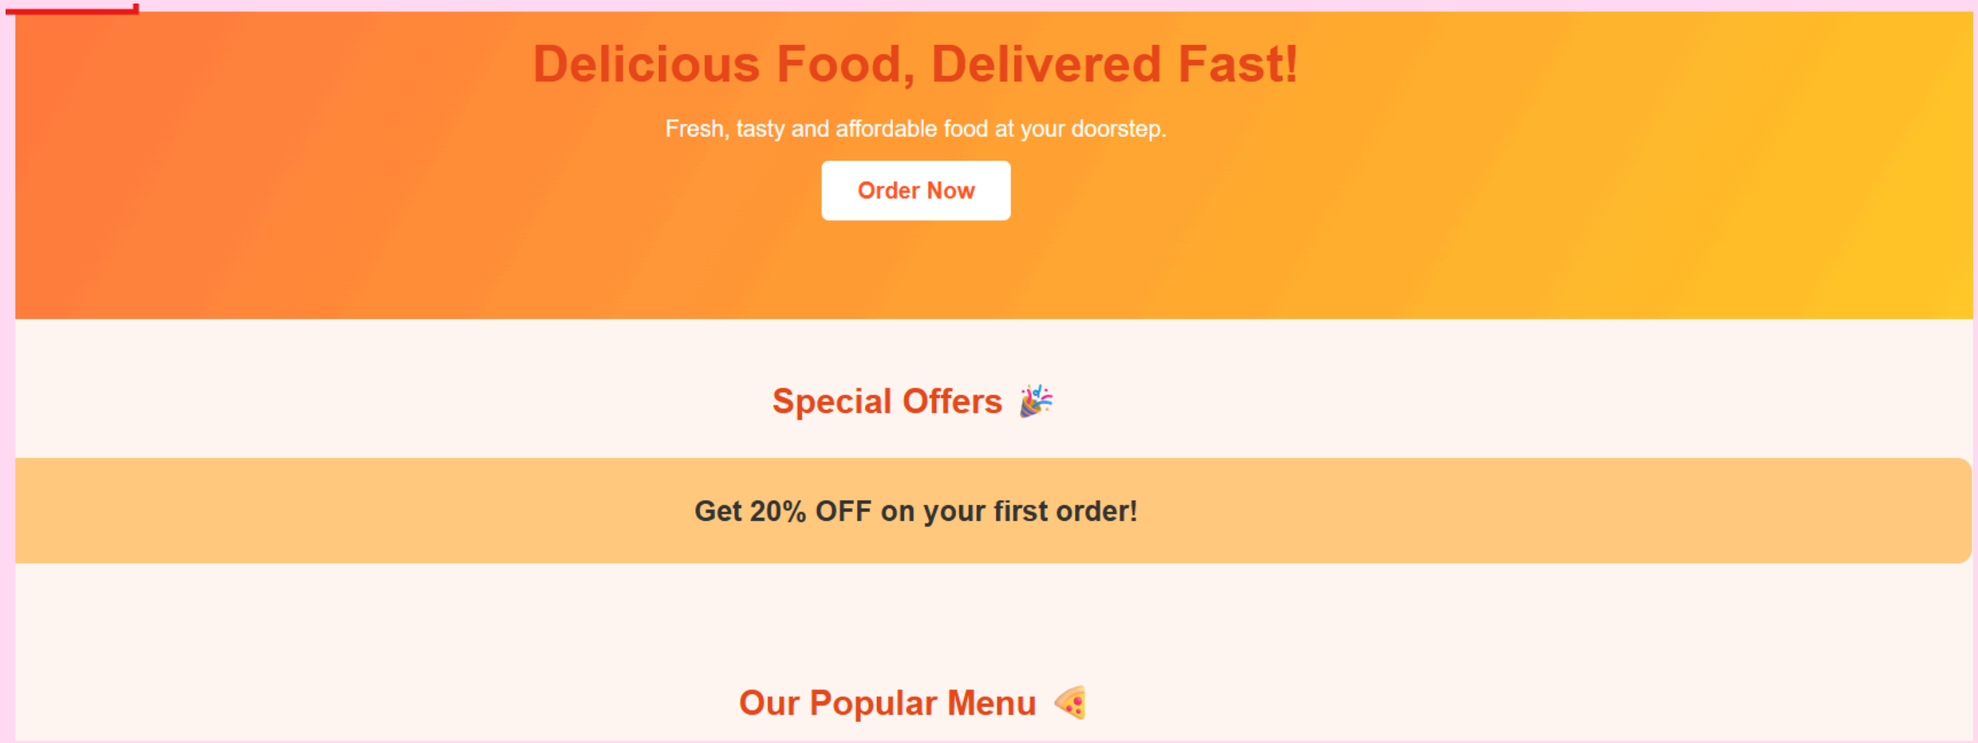

Explanation

1. HTML Structure: HTML5 is used to create the basic structure of the webpage.
2. Head Section: Contains the webpage title and links the external CSS file (slector.css).
3. Header: Displays the website name Foodie and navigation links like Home, Menu, Offers, and Reviews.
4. Home Section: Displays a welcome message and Order Now button.
5. Offers Section: Shows a special discount of 20% on the first order.
6. Menu Section: Displays food items with images, descriptions, prices, and order buttons.

Conclusion

This project creates a simple online food ordering interface where users can view food items, check prices, explore offers, and click order buttons.

Bus and Train Ticket Booking Interface

EXPLANATION OF MY WEBSITE

Easy Travel Booking Website Explanation 🚌🚆

1. Introduction

My website name is Easy Travel Booking. It is a simple bus and train ticket booking website developed using HTML and CSS. It helps users view travel services, check ticket fares, enter passenger details, and select seats.

2. Technologies Used

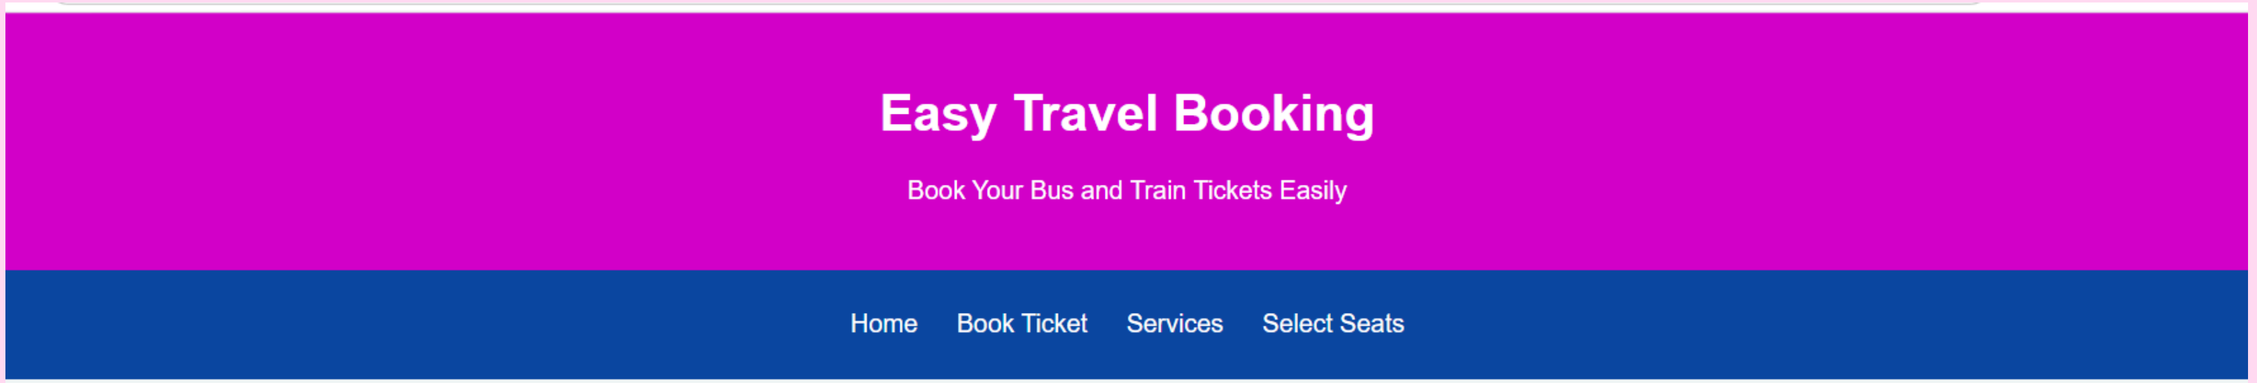

- HTML: Creates the structure of the website.
- CSS: Adds colors, styles, and designs using the external login.css file.

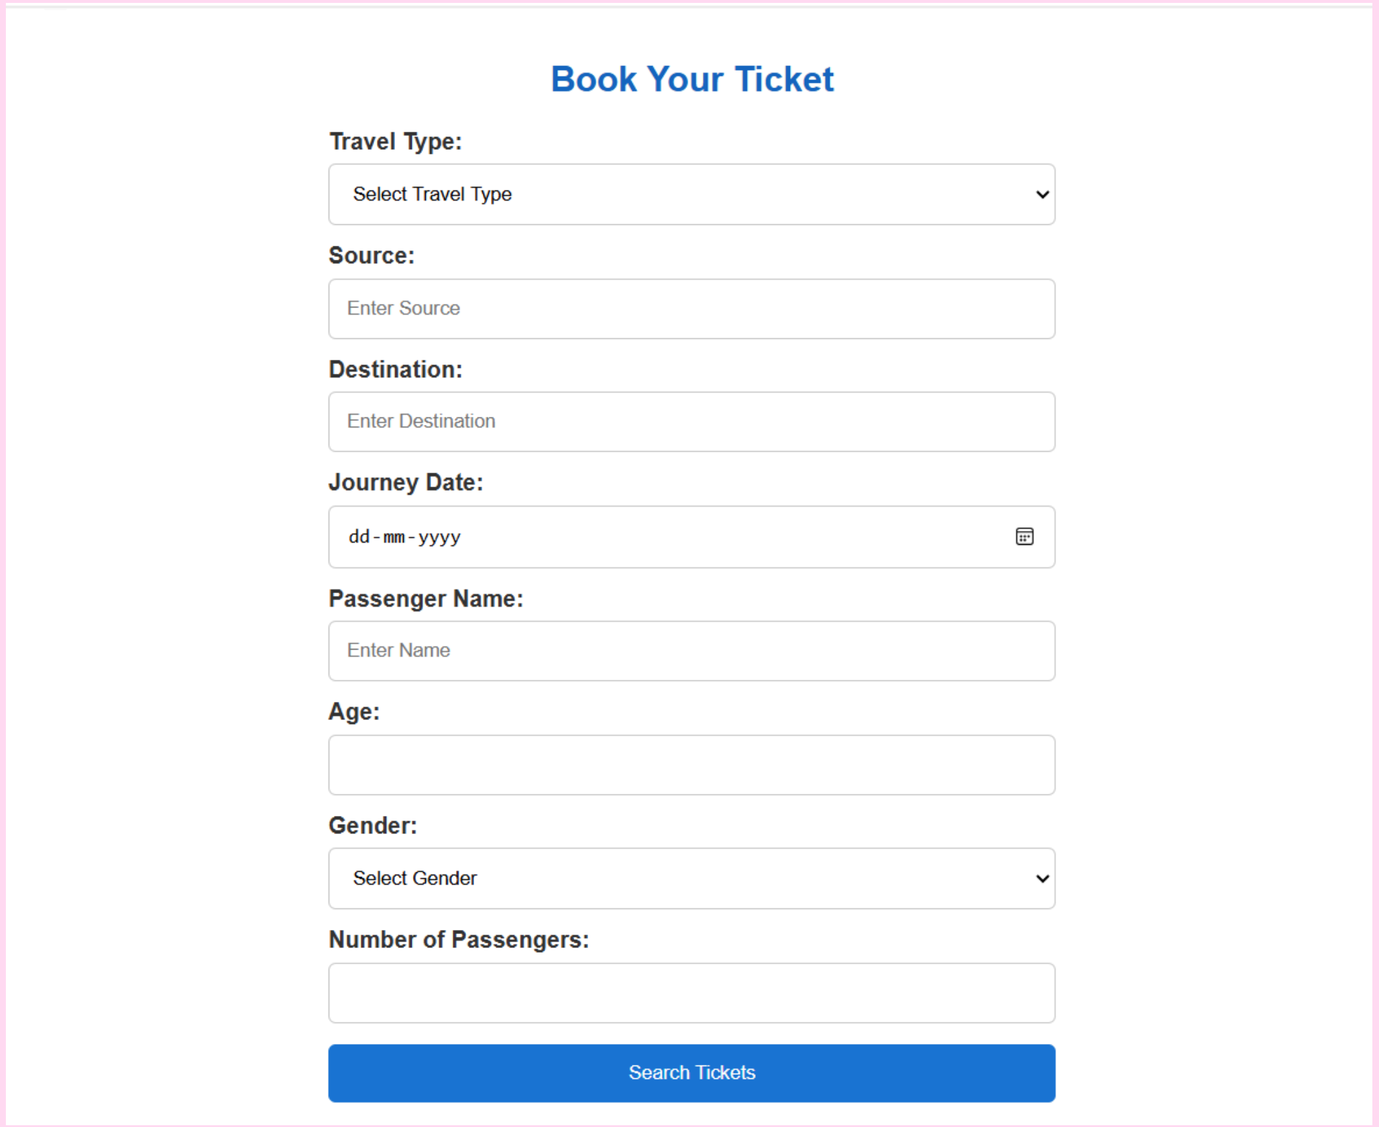

Note: Currently, this is a basic front-end website. Actual ticket searching, seat availability, payment, and booking confirmation are not connected to a real booking system.

Conclusion

My Easy Travel Booking website provides a simple interface for exploring bus and train services, entering passenger details, checking fares, and selecting seats. This project helps me understand the basics of web development using HTML and CSS.
